## NEW PRODUCTS - "DBM" Minidigi Boring Tools

Micro 100 is pleased to introduce a new family of  
**Coolant Through Boring tools.**

These solid carbide boring tools are designed specifically for the  
**Wohlhaupter** MiniDigi Boring heads.

- \* The **DBM** Boring product family of tools are found on page 79, as a **NEW** catalog offering.
- \* **DBM** tools all have 8mm shanks, so that no reducer sleeves are necessary.
- \* These **DBM** tools are ideally suited for aluminum, plastics, steels, stainless steels, titanium, and a wide variety of other materials.
- \* **DBM** tools come with coolant through holes on tools with minimum bores less than 0.080".
- \* **DBM** tools come with coolant grooves on tools with minimum bores of 0.080" and above.
- \* **DBM** tools are all available with AlTiN coating, which has been found to enhance performance in many applications. For a coated tool, just add an "X" to the end of the part number.
- \* Stock is already on the shelf for nearly all of the catalog sizes.
- \* Micro 100 is always ready to quote you this style of tooling for your special boring dimensional callout needs.

If you have further questions about our NEW Minidigi Boring tools, please contact
