NEW PRODUCTS - "KC" Keyseat Cutters

Micro 100 is pleased to introduce our new family of Keyseat Cutters. The solid carbide construction improves cutting action, while minimizing vibration and chip dragging, therefore improving sidewall finishes.

- * The **KC** family product new catalog offering, starting on page 91, begins with four and six flutes, and expands in the larger diameters to eight fluted tools for maximum cutting efficiency.
- * Cutter widths are offered with a range of thicknesses to offer the user the best choices for the application.
- * The KC family is available in inch dimensions, with shank sizes ranging from .125" to .500".
- * KC cutter diameter sizes range from .093" up to .500".
- * KC tools are made with both standard and long reach options for each diameter size.
- * Cutter Diameter tolerances on the KC tools are +.000" - .002"
- * These high precision keyseat cutters are ideal for finishing, semi-finishing, and universal applications in soft, medium and hard materials.
- * KC tools are all available with AlTiN coating, which has been found to enhance performance in many applications. For a coated tool, just add an "X" to the end of the part number.
- * Stock is already on the shelf for nearly all of the catalog sizes.
- * Micro 100 is always ready to quote you this style of tooling for your special dimensional callout needs.

If you have further questions about our NEW Keyseat Cutters, please contact the Micro 100 Customer Service Team and they will be happy to assist you.
